

DAT/EM Keypad™

DAT/EM Systems is proud to present the **DAT/EM KEYPAD**, a multipurpose reprogrammable touchpad. Originally designed to run with our **DAT/EM CAPTURE** stereoplotters interfaces, the **DAT/EM KEYPAD** is versatile enough to use either as an accessory or as a stand-alone product.

DAT/EM KEYPAD features include:

- Compatible with all Pentium-based computers running Windows 2000/XP® operating systems.
- Keypad membrane has 252 easily programmable keys.
- Durable tactile touch character keys are rated for 5 million hits.
- Changeable 8½" by 11" overlay/menu is easily customized and printed on any system printer.
- An infinite number of keypad layers are supported through the user-friendly programming interface.
- Communications use either USB or 9-pin serial. No power supply is necessary for the USB connection.
- Supports the use of multiple keypads via a USB Hub.
- The **DAT/EM KEYPAD**'s design is digital, with no interface box.
- The **DAT/EM KEYPAD** can be used with **DAT/EM Systems** mapping and editing interfaces for AutoCAD®, MicroStation®, and ArcGIS®.
- A generic, customizable interface provides expanded functionality for general use by launching executable programs, or processing system commands for other third-party Windows applications.
- In addition to being easy to use, the **DAT/EM KEYPAD** is durable, cost effective, and attractive.
